OLAHANMI HABEEB

Software Engineer & AI Systems Architect

Nigeria | Phone: +234 911 316 7256 | Email: olahanmihabeeb2@gmail.com

GitHub: github.com/Bumblebee2567 | Portfolio: [Your Portfolio URL]

PROFESSIONAL SUMMARY

Innovative and results-driven Software Engineer with a deep specialization in Python backend engineering, Flask architecture, and the integration of cutting-edge artificial intelligence models into web-based ecosystems. Proven ability to design, develop, and deploy scalable, high-performance applications from the ground up. Adept at translating complex theoretical concepts—particularly in STEM fields—into streamlined digital tools. Passionate about clean code principles, RESTful API design, and building intelligent user interfaces that bridge the gap between heavy backend processing and seamless user experiences.

TECHNICAL EXPERTISE

- Languages & Core Technologies: Python (Advanced), JavaScript (ES6+), HTML5, CSS3, SQL
- Backend & API Architecture: Flask, RESTful API Design, Server-Side Routing, Asynchronous Request Handling, Session Management, MVC Architecture
- Frontend Development: Responsive Web Design, DOM Manipulation, UI/UX Implementation, Cross-Browser Compatibility

- Artificial Intelligence & Machine Learning: LLM Integration, Vision Model Implementation, Prompt Engineering, Automated Problem-Solving Logic for STEM (Mathematics, Physics, Chemistry)
- DevOps, Tools & Workflow: Git, GitHub Version Control, Command Line Interfaces, Performance Optimization, Debugging, Deployment Pipelines (Render, Vercel, PythonAnywhere)

FLAGSHIP ENGINEERING PROJECTS

Insite AI — Advanced Educational Problem-Solving & Study Platform | Lead Architect & Creator

- Tech Stack: Python, Flask, JavaScript, HTML5, CSS3, Integrated AI Vision & Language Models
- Project Scope: Architected and deployed a comprehensive, intelligent web application designed to act as an advanced academic assistant for mathematics, physics, chemistry, and general student queries.
- Backend Engineering: Built a robust, secure, and lightning-fast Flask backend handling complex request-response cycles, dynamic route handling, and secure data transmission.
- AI Integration Layer: Engineered the integration pipeline connecting web architecture with advanced AI models. Implemented custom prompt structuring to ensure the AI delivers rigorous, step-by-step mathematical proofs and scientific breakdowns rather than mere answers.
- File & Vision Processing: Implemented file and document inspection capabilities, allowing the system to process uploaded assets and return contextual, accurate technical feedback.
- Frontend & UX Optimization: Developed a fully responsive, modern user interface featuring custom CSS styling, dynamic error handling, and a

clean, developer-centric layout that guarantees optimal performance across desktop and mobile viewports.

Full-Stack Developer Portfolio & Professional Ecosystem | Creator

- Tech Stack: HTML5, Modern CSS3 (Custom Variables, Flexbox, Grid), JavaScript
- Project Scope: Designed and developed a high-performance personal portfolio website to serve as a digital flagship for engineering credentials.
- Custom Architecture: Engineered a fully custom design system without relying on heavy CSS frameworks (like Bootstrap), resulting in ultra-fast load times and optimized rendering.
- Interactive UX: Implemented responsive mobile navigation, dynamic interactive elements, and accessible direct-action links (WhatsApp, Email, GitHub).

PROFESSIONAL EXPERIENCE

- Software Engineer & Independent Technical Consultant | Freelance & Open-Source
- Period: Present
- System Development: Design, architect, and deploy custom full-stack web applications tailored to specific user requirements, maintaining high standards of code modularity and maintainability.
- AI Research & Integration: Research and integrate emerging technologies—specifically generative AI and automated backend services—into traditional web application frameworks.
- Quality Assurance: Conduct rigorous unit testing, performance profiling, and debugging to eradicate latency issues and secure applications

against vulnerabilities.

EDUCATION & CONTINUOUS TECHNICAL MASTERY

- Self-Directed & Advanced Engineering Specialization
- Intensive, practical application of software engineering principles, data structures, and algorithmic problem-solving.
- Continuous study in advanced Python backends, scalable cloud hosting, and the deployment of AI-driven SaaS applications.

- CORE ENGINEERING COMPETENCIES

- System Design & Scalability: Skilled at structuring clean directories, separating concerns across MVC patterns, and writing maintainable code that scales smoothly as feature sets expand.
- Analytical Problem Solving: Exceptional capability in breaking down multi-layered bugs, tracing execution flows across server and client sides, and optimizing code throughput.
- Technical Communication: Adept at translating deeply technical constraints and system architectures into clear, actionable terms for stakeholders and end-users.
